---

---

---

---

---

---

---

---

---

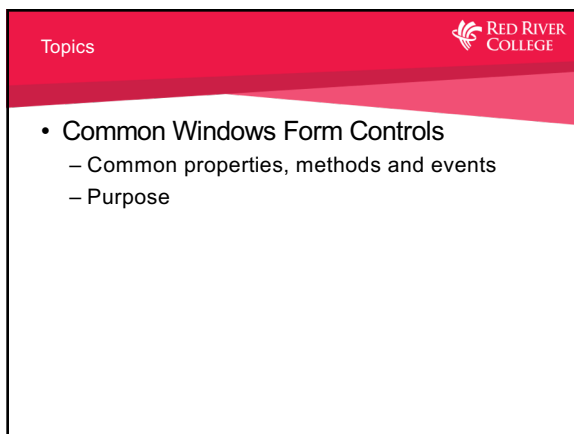

---

---

---

---

---

---

---

---

---

---

---

Controls (1 of 2)

- Each serves a specific purpose
- Choosing the wrong control can make the application difficult to use
- Goal is to develop your application like other Windows applications

---

---

---

---

---

---

---

Controls (2 of 2)

- Derive from `System.Windows.Forms.Control` Class
- All controls have a common set of:
  - Properties
  - Method
  - Events

---

---

---

---

---

---

---

Controls - Common Properties & Methods

<ul style="list-style-type: none"><li>• Properties<ul style="list-style-type: none"><li>– Dock</li><li>– Enabled</li><li>– Font</li><li>– Height</li><li>– Name</li><li>– Size</li><li>– Text</li><li>– Visible</li><li>– Width</li></ul></li></ul>	<ul style="list-style-type: none"><li>• Methods<ul style="list-style-type: none"><li>– <code>Focus()</code></li></ul></li></ul>
---	---

---

---

---

---

---

---

---

**Button Control**

- User initiates an action
- Click or <enter> when focused

---

---

---

---

---

---

---

**Button Class – Common Members**

- **Properties**
  - Name (prefix btn)
  - Text
- **Events**
  - Click

---

---

---

---

---

---

---

**Checkbox Control**

- Boolean input (toggle)
- Select an option; true/false, yes/no

☐ checkBox1

---

---

---

---

---

---

---

Checkbox Class – Common Members

- **Properties**
  - Name (prefix chk)
  - Checked
  - Text
- **Events**
  - CheckChanged

---

---

---

---

---

---

---

Label Control

- Output
- Display text

---

---

---

---

---

---

---

Label Class – Common Members

- **Properties**
  - Name (prefix lbl)
  - AutoSize
  - BorderStyle
  - Text
- **Events**
  - TextChanged

---

---

---

---

---

---

---

NumericUpDown Control

- Input numeric value
- Will not allow letter or special character input

---

---

---

---

---

---

---

NumericUpDown Class – Common Members

- Properties
  - Name (prefix nud)
  - DecimalPlaces
  - Increment
  - Maximum
  - Minimum
  - TextAlign
  - ThousandsSeparator
  - Value
- Events
  - ValueChanged

---

---

---

---

---

---

---

RadioButton Control

- Select one of various options
- Two or more options
- Grouped by the container control (Collection) they are in

---

---

---

---

---

---

---

RadioButton Class – Common Members

- Properties
  - Name (prefix rad)
  - Checked
  - Text
- Events
  - CheckedChanged

---

---

---

---

---

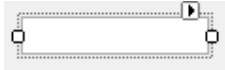

---

---

TextBox Control

- Input
- Single or Multi-line

---

---

---

---

---

---

---

TextBox Class – Common Members

- Properties
  - Name (prefix txt)
  - Size
  - Text
  - TextAlign
- Methods
  - Clear()
  - SelectAll()
- Events
  - Enter
  - Leave
  - TextChanged

---

---

---

---

---

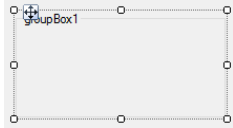

---

---

GroupBox Control

- Container control
- Groups other controls
- Visible border and text

---

---

---

---

---

---

---

GroupBox Class – Common Members

- Properties
  - Name (prefix grp)
  - Size
  - Text

---

---

---

---

---

---

---

Panel Control

- Same as Group Box
- Minus border and text
- Prefix pnl

---

---

---

---

---

---

---

ErrorProvider Component

- Indicates an input error
- Design view – component panel
- Only one instance needed per form

---

---

---

---

---

---

---

ErrorProvider Class - Common Members

- **Properties**
  - Name Property (errorProvider)
  - BlinkStyle Property (NeverBlink)
- **Methods**
  - SetError(Control, String) : void
  - GetError(Control) : String
  - SetIconPadding(Control, int) : void

---

---

---

---

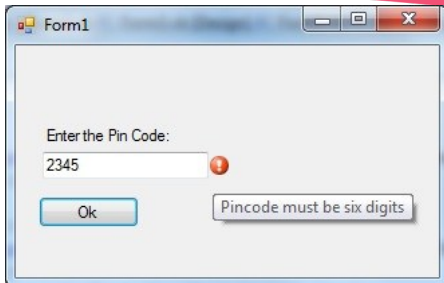

---

---

---

ErrorProvider On a Form

---

---

---

---

---

---

---

Form is a Control

Inheritance:

Object → MarshalByReference →  
 Component → Control → ScrollableControl  
 → ContainerControl → Form

---

---

---

---

---

---

---

Form Class – Common Properties & Methods

<ul style="list-style-type: none"> <li>• Properties</li> <li>– AcceptButton</li> <li>– CancelButton</li> <li>– Controls</li> <li>– FormBorderStyle</li> <li>– Height</li> <li>– MaximizeBox</li> <li>– MinimizeBox</li> <li>– ShowIcon</li> <li>– StartPosition</li> <li>– Text</li> <li>– Visible</li> <li>– Width</li> </ul>	<ul style="list-style-type: none"> <li>• Methods</li> <li>– Close()</li> <li>– Show()</li> <li>– ShowDialog()</li> </ul>
--	--

---

---

---

---

---

---

---

Form Events

<p><b>Show</b></p> <ol style="list-style-type: none"> <li>1. Control.HandleCreated</li> <li>2. Control.BindingContextC hanged</li> <li><b>3. Form.Load</b></li> <li>4. Control.VisibleChanged</li> <li>5. Form.Activated</li> <li><b>6. Form.Shown</b></li> </ol>	<p><b>Close</b></p> <ol style="list-style-type: none"> <li>1. Form.Closing (obsolete)</li> <li><b>2. Form.FormClosing</b></li> <li>3. Form.Closed (obsolete)</li> <li><b>4. Form.FormClosed</b></li> <li>5. Form.Deactivated</li> </ol>

---

RED RIVER  
COLLEGE

Unit 5 - Controls

## LIST CONTROLS

---

---

---

---

---

---

---

RED RIVER  
COLLEGE

Items Property

- Collection of objects the list control stores
- Can do all your typical collection functions
- Objects displayed to the UI using their ToString method

---

---

---

---

---

---

---

RED RIVER  
COLLEGE

ComboBox Control

- Used for selecting items from a list
- Often used in place of RadioButtons when there are many options

---

---

---

---

---

---

---

RED RIVER COLLEGE
DropDownStyle Property

- Three different styles:
  - Simple
  - DropDown (default)
  - DropDownList

---

---

---

---

---

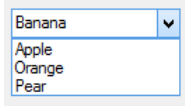

---

---

---

RED RIVER COLLEGE
DropDown Style (default)

- Choose item from a list by clicking the arrow
  - List is only visible when arrow is clicked
  - Selected Item text displays in the control
- Text can be entered by the user if the item is not in the list

---

---

---

---

---

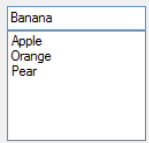

---

---

---

RED RIVER COLLEGE
Simple Style

- Choose item from a list
  - List is always visible
  - Selected Item text displays in the control
- Text can be entered by the user if the item is not in the list

---

---

---

---

---

---

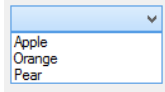

---

---

DropDownList Style

- Choose item from a list by clicking the arrow
  - List is only visible when arrow is clicked
  - Selected Item text displays in the control
- Text cannot be entered by the user

---

---

---

---

---

---

---

ComboBox Class – Common Members

- Properties
  - Name (Prefix cbo)
  - DropDownStyle
  - Items
  - SelectedIndex
  - SelectedItem
  - Text
- Events
  - SelectedIndexChanged Event

---

---

---

---

---

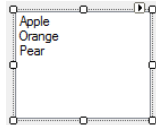

---

---

ListBox Control

- Multiple items visible
- Supports multiple selections

---

---

---

---

---

---

---

SelectionMode Property

- Four modes:
  - None
  - One (default)
  - MultiSimple
  - MultiExtended

---

---

---

---

---

---

---

ListBox Class – Common Members

- Properties
  - Name (Prefix lst)
  - Items
  - SelectedIndex
  - SelectedIndices
  - SelectedItem
  - SelectedItems
  - SelectionMode
- Methods
  - ClearSelection()
- Events
  - SelectedIndexChanged

---

---

---

---

---

---

---

Unit 5 - Controls

## MENUS

---

---

---

---

---

---

---

MenuStrip Control

- AKA Main menu
- Text menu docked at the top of the window
- Contains all tasks of the application
- Can contain contextual items

---

---

---

---

---

---

---

Menu Strip Standards

- File always the first item
  - Exit always last child item
- Help always last item
  - About always last child item
- Always use standard shortcuts
  - Ctrl+S
  - Ctrl+C
  - F1, etc
- Menu items that open a dialog window must end with "..."
  - Example: Tools > Options...

---

---

---

---

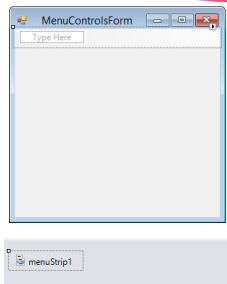

---

---

---

Designing a Menu Strip

---

---

---

---

---

---

---

---

---

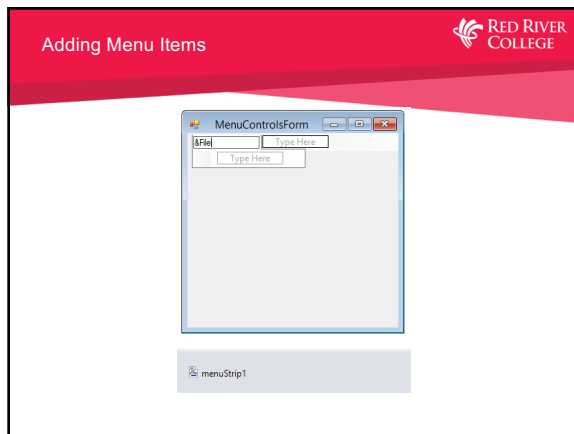

---

---

---

---

---

---

---

---

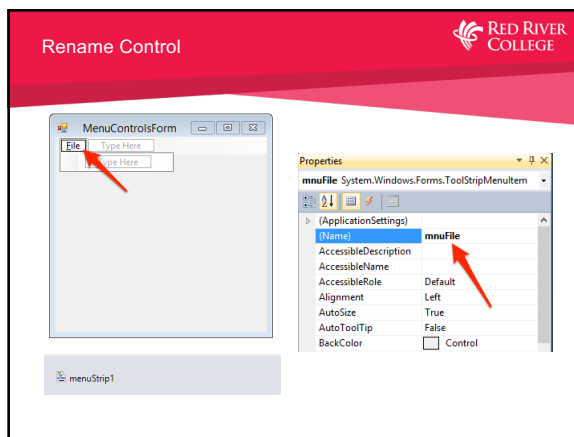

---

---

---

---

---

---

---

---

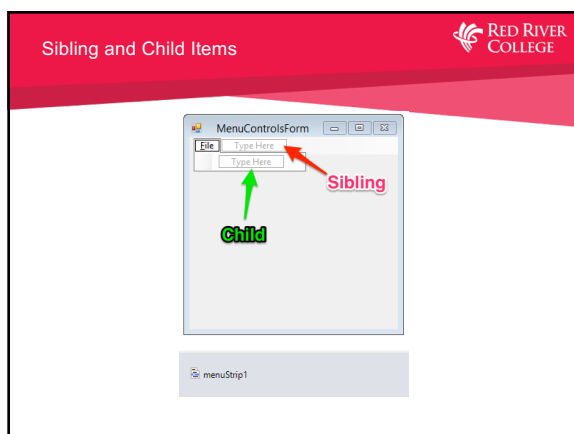

---

---

---

---

---

---

MenuStrip Class – Common Members

- Properties
  - Name (prefix ms)
  - Items

---

---

---

---

---

---

---

ToolStripMenuItem Class - Common Members

- Properties
  - Name (mnuRootSub[Sub...]Item)
  - Image
  - ShortcutKeys
  - Text
    - & for keyboard accessor
    - - (hyphen) for separator bar
- Events
  - Click

---

---

---

---

---

---

---

ToolStrip Control

- AKA Toolbar
- Icon bar docked at the top of a container
- Common tasks

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

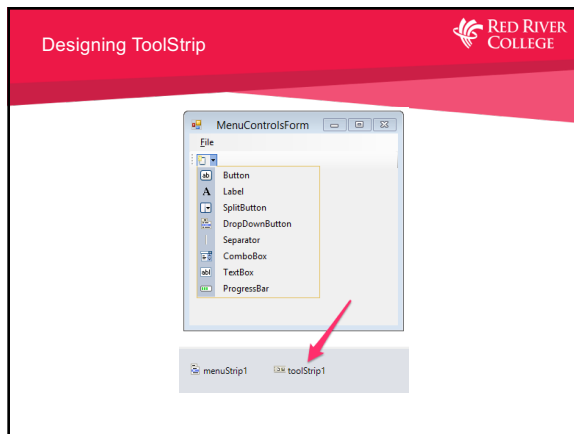

---

---

---

---

---

---

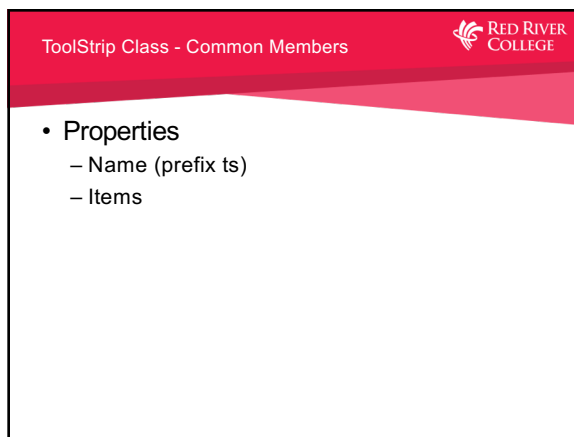

---

---

---

---

---

---

---

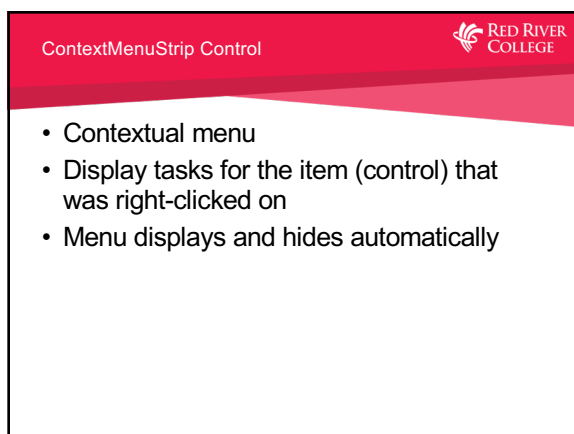

---

---

---

---

---

---

---

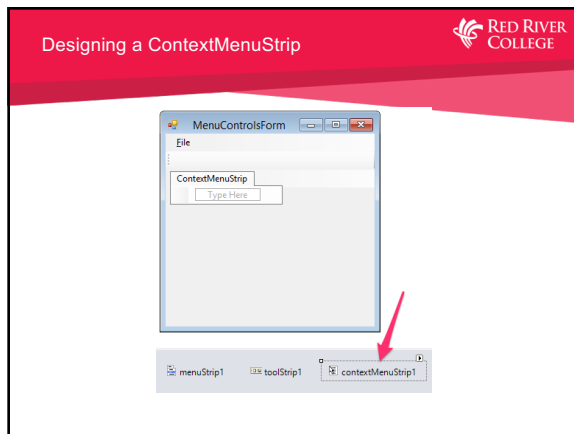

---

Dialog Box

- AKA Message Box
- MessageBox static class
- Show() method
- Window is opened as modal

---

---

---

---

---

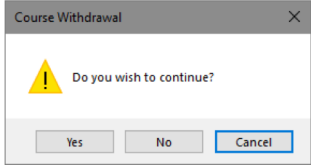

---

---

MessageBox Class Example

```
MessageBox.Show("Do you wish to continue?",  
    "Course Withdrawal",  
    MessageBoxButtons.YesNoCancel,  
    MessageBoxIcon.Exclamation,  
    MessageBoxDefaultButton.Button3);
```

---

---

---

---

---

---

---

Unit 5 - Controls

## ABOUT BOX

---

---

---

---

---

---

---

---

---

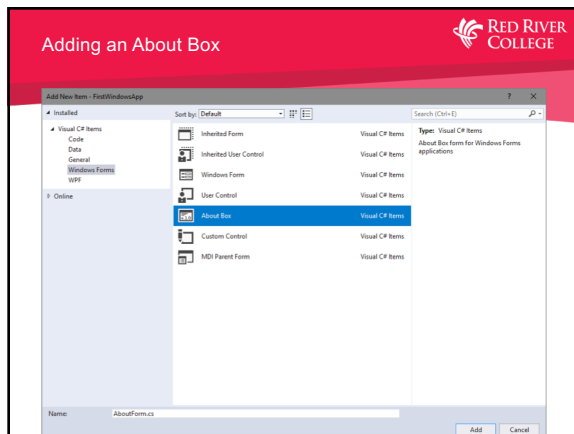

---

---

---

---

---

---

---

---

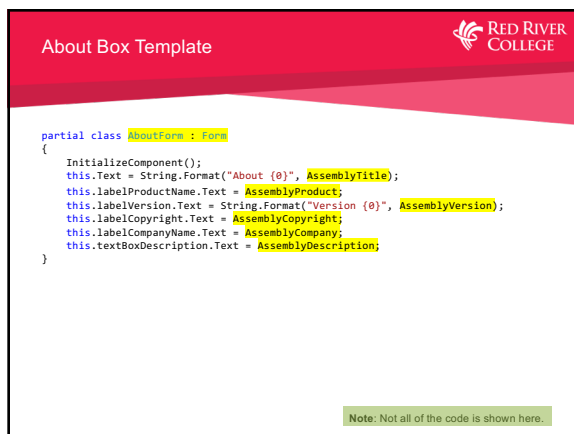

---

---

---

---

---

---

---

---

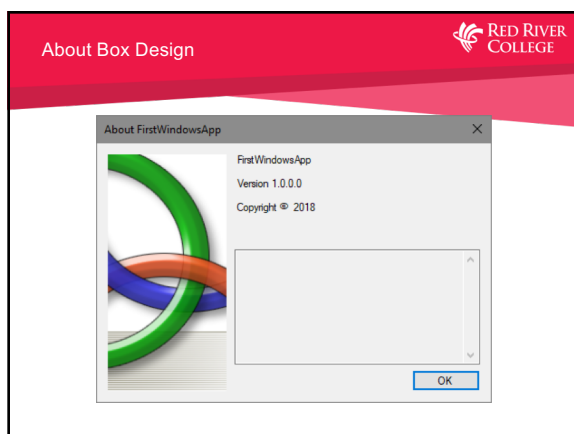

---

---

---

---

---

---

About Box Implementation

- Already coded; DO NOT modify
- Accesses the assembly (.exe) metadata

---

---

---

---

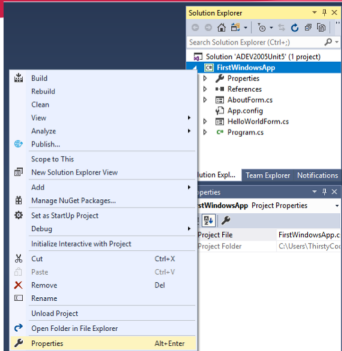

---

---

---

Accessing Project Properties

---

---

---

---

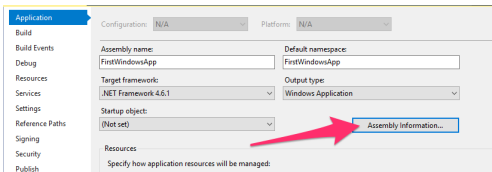

---

---

---

Accessing Assembly Information

---

---

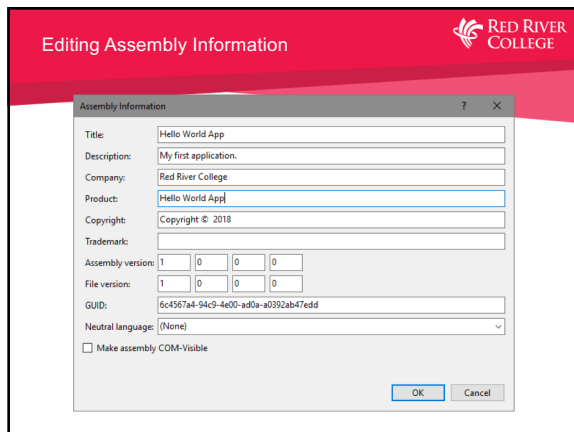

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

Summary

- All controls derive from Control class
  - Common properties, methods and events
- Every control has a purpose; choose wisely
- About Box – Class already contains implementation

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---
